EXPERIENCE

Middle Front-End Developer

Esteriol Solutions

July 2022 – Current time

Trainee / Junior Front-End Developer

MeGaDev llc

March 2020 – May 2022

Responsible for the frontend part of several projects. Building adaptive sites from the scratch. Fixing bugs and supported projects. I created complex components with mathematics and logic related to blockchain technology, worked with external API for data mapping, also worked with design libraries and creation of custom components.

PROJECT HISTORY

Software developer May 2021 – April 2022

Project: "Cryptocurrency platform" - development of the Cryptocurrency platform. Users have the possibility to connect their crypto wallets to the platform and do any transactions. The platform has its own tokens with changing rates. The rates of the tokens depend on the results of sports events.

Responsibilities: On the project I was involved in admin panel, API implementation related to sport events. Also creating logic and math for farming page

Technologies: HTML, CSS(SCSS), Bootstrap, Vue3, Vuex, Web3.

Configuration Management: GIT

OS: MacOS

Software developer January 2021 – May 2021

Project: "Admin panel" - for the site of statistics, with its help, the registered user can see the statistics of their companies and analyze the work..

Responsibilities: On the project was engaged in the development of the admin panel from scratch. Created the architecture and logic of the project. Had my first experience with jVectorMap and Chart.js libraries

Technologies: HTML, CSS(SCSS), Bootstrap, Angular, Typescript, Nebular, VectorMap, Chart.js

Configuration Management: GitLab

OS: MacOS

Software developer Sep 2020 – Dec 2020

Project: "Online store" - a platform for selling machinery, with an admin panel for adding and removing products as well as tracking statistics.

Responsibilities: Worked with a team to create an online store. There were tasks on the functions of the admin panel and directly on the display of products in the store.

Technologies: HTML, CSS(SCSS), Bootstrap, Angular, Material Design, Typescript.

Configuration Management: Git

OS: Windows

Software developer Aug 2020 – Sep 2020

Project: "Website" - developing a landing page for an IT company.

Responsibilities: Work was done to create a website for an IT company. The site contained more than 8 static blocks. Bootstrap and JavaScript were used for dynamic actions..

Technologies: HTML, CSS(SCSS), Bootstrap (Material Design for Bootstrap), JavaScript.

Configuration Management: Git

OS: Windows

Software developer Mar 2020 – Aug 2020

Project: "Website MeGaDev LLC" - participated in the creation and development of the company website. Also continues to support and update the site.

Technologies: HTML, CSS(SCSS), Bootstrap, JQuery, JavaScript.

Configuration Management: Git

OS: Windows
